

In the year 2013, in a disastrous offensive upon the Earth, the Decepticons will wipe out the entire human race in a hot, nuclear death. Unable to save those whom they swore to defend, the Autobots will lose focus and meander the Universe until their once noble race is extinct.

This is merely but one eventuality.

In the year 2247 a misguided cell of Autobots will proclaim themselves a sovereign nation over the Earth. A troupe of the damned, they are divorced from the wisdom of the Matrix. An inconsequential cog in a machine that does nothing, humanity becomes obsolete. The Earth becomes a machine state, a shrine to an alien technology. Throughout the perpetuity of time the human race will exist stripped of its genius and its capacity for growth. With its brilliance muted, humanity becomes inhuman.

This is but another.

In the fourth decade of the 115th Century, Unicron's mass will coalesce. His atoms will realign. His essence will form the embryo of a new entity, one forged in the very essence of the Matrix itself. It has no weakness. No equal. It has but one desire, to feed. It shall.

From time to time, the capacity for total annihilation reaches a precipice, a contingency atop contingencies, all dancing towards oblivion. Universal ruination is often averted by mere chance, entropy or by intervention. Occasionally it is not averted at all. This is, however, rare. A universe of chaos cannot exist. Order is the nature of the cosmos.

Of course, when nature is compromised, all bets are off...

Earth, North America. March 11th, 1987.

The indomitable headquarters of the Autobots, it is a rugged testament to its own solidity. Aeons ago it plummeted from the heavens and collided with a newly-formed volcano. Its structure remained sound. Its crew intact. Today it rests in the side of Mt. Saint Hillary, defiantly, with its backside in the air. Its crew now its inhabitants, it serves as the strategic and familial nerve-center of the valiant race of Cybertronians.

Today is like any other day at this place, with one notable exception. The world is about to end.

Well, that may be an exaggeration.

Notes:

Characters:

Autobots.

Optimus Prime. Wise leader of the Autobots.

Hound. Scout.

Gears. Reconnaissance

Wheeljack. Engineer

Benjamin Franklin Pierce. Hawkeye. Surgeon.

Incidental characters.

Autobots:

Sideswipe

Decepticons:

Brawl

Swindle

Humans:

Spike

BJ Honneycut

Sherman Potter

Charles Emmerson Winchester

Margaret Hoolihan

Radar
